

Series UPX-TD, Indoor LCD totem, double-sided

Totem LCD Duo

Double-sided LCD totem for shopping centres, airports and foyers. With light strips on the sides.

Brightness
700 nit

Totem LCD Duo shows a picture on both sides, so the totem is seen from both walking directions. The light strips on the sides make it visible in crowds, and they also stop people walking into it.

A light sensor adjusts the brightness to the room.

Two sides. High brightness on both screens.

Cooled as needed. The fans run only as fast as needed.

Secure. Toughened glass IK10 protects the screen and passers-by.
